Dear Colleagues,

The highlights of our anatomical workshop, which has been taking place for 12 years, is to demonstrate the basic principles of Liposuction and Bodycontouring in well-prepared anatomical preparations.

Over the years we have succeeded in recruiting a team of experienced specialists who can also communicate the individual techniques authentically. The course is intended for both novice and advanced students! It will take place over 2 days (Thursday + Friday), on Saturday there is also an additional live surgery program.

Our great thanks are due to Prof. Friedrich Anderhuber and his team, who has developed his institute for the "Vatican" for clinical anatomy.

To our knowledge, this course is unique in its process and aims to set both anatomical and technical standards.

We cordially invite you to this meeting, where well-founded knowledge is to be conveyed in a friendly atmosphere.

Dr. Matthias Sandhofer

Founder and honorary president of the AACMS
